DESCRIPTIVE CATALOGUE OF

VEGETABLE SEEDS

With General Directions for Cultivation

Edward A. Peth

Frank M. Duggan

SPECIAL NOTICE.—On account of unusual prevailing conditions, all prices in this catalogue are subject to change without notice.

We desire to call the particular attention of our friends and patrons to the following list of our Vegetable Seeds, which will be found to embrace all the leading and most popular varieties in cultivation:

ASPARAGUS

ASPERGE. *Esparrago*. *Spargel*.

One ounce will sow 50 feet of row, and produce about 1200 plants.

Sow the seed as early in Spring as the soil can be worked, in drills 12 to 14 inches apart, and when well started thin out to 3 inches apart. When one or two years old, transplant into permanent beds, thoroughly trenched, 2 feet or more in depth. Set the plants in rows 2 feet apart and not less than 18 inches apart in the row. Very little, if any, should be cut the first year after transplanting, but a fair crop can be cut the second year. Every Fall after the tops have been cut down apply a dressing of coarse manure. An occasional top dressing of salt at the rate of $\frac{1}{2}$ pound per square yard is also beneficial and keeps down the weeds.

COLUMBIAN MAMMOTH WHITE. The stalks are very large, clear white, and remain so as long as fit for use. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; lb. 60c.

PALMETTO. A large, early variety, of a deep green color. More regular and even in size than any other variety. Pkt. 5c; oz. 10c; $\frac{1}{4}$ lb. 20c; lb. 60c.

Asparagus, Palmetto.

Asparagus Roots

A saving of one or two years is effected by planting roots. A bed 12 by 40 feet, requiring about 100 roots, should give a sufficient supply for an ordinary family. If planted in rows 3 feet apart and 2 feet between the plants, 7260 roots will plant an acre. We offer only strong

3-year-old roots. If ordered by mail, postage must be added at the rate of 15c per 100

ALL ROOTS ARE THREE YEARS OLD.

Giant Argenteuil. White. 100, \$1.50; 1000, \$10.00. Palmetto. 100, \$1.50; 1000, \$10.00.

ARTICHOKE

ARTICHAUT.
Alcachofa.
Artichoke.

One ounce will sow 100 feet of row, and produce about 500 plants.

A deep, rich sandy loam is best adapted for this plant. The seed should be sown thinly in drills $1\frac{1}{2}$ inches deep and 1 foot apart. When large enough, transplant to permanent rows 3 feet apart, allowing 2 feet between the plants.

IMPROVED LARGE GREEN GLOBE. The heads are large, fleshy, and of a rich flavor. Pkt. 10c; oz. 50c.

JERUSALEM. Grown for the tubers, which resemble potatoes, and are cultivated in similar manner. The rows should be at least 4 feet apart. Qt. 30c; pk. \$2.00.

French Globe Artichoke Roots

Large, extra-strong roots of the green incurved variety, with a section of the parent stem attached. These "suckers" are taken from selected plants, insuring a high-grade product, which cannot be had from the ordinary seedling stock. 35c each; \$3.50 per dozen.

BEANS

Beans like a well-drained, rich and light loam, and should not be planted too early. Plant about the middle of April when warm and favorable, and at intervals throughout the season for succession until the latter part of August. Bush varieties should be planted in drills 2 feet apart, and from 2 to 6 plants to the foot in a row. Keep them well cultivated and draw the earth up to the stems.

MUSHROOM SPAWN

Ten pounds will spawn about 10 feet square.

Mushroom beds may be made in a warm, dry cellar, or in any building where the frost does not penetrate, and in the open air during the Summer and Fall months. Having procured the spawn, the next thing to be attended to is to make preparations for the beds. About a fortnight or three weeks before the beds are to be made, collect a quantity of fresh horse manure without the straw; place it in a heap under cover, and as it heats keep turning it over once or twice a week, until the fiery heat has become exhausted, which will require from ten to fourteen days' time. When the manure is in a condition to be made up, lay out your bed according to your requirements, say 3 feet wide, 10 feet long, and from 2 to 3 feet deep; Beat it well down with the back of the spade as the process of building goes on. When the bed has been made some time, say a week or thereabouts, and the heat sufficiently declined to a temperature of 65 or 75 degrees, the spawn may be put into it. Break the spawn in pieces 2 inches square, and put them 6 inches apart all over the bed, then cover the bed with 2 inches of rich soil. When the soil looks dry, give a gentle watering with tepid water, using a hose on the watering-pot.

Price—Qt. 30c; pk. \$1.75; bus. of 20 lbs. \$6.00.

Finest Mixtures for Hay and Permanent Pasture

Special mixture containing only the most suitable grasses for permanent pastures and meadow lands, such as Orchard Grass, Meadow Foxtail, Sheep's Fescue, Rhode Island Bent, Meadow Fescue, English Rye Grass, Perennial Sweet Vernal and Red Top in such proportions as will insure the most satisfactory results. COLDWELL'S IMPERIAL LAWN MOWER

Coldwell's Imperial Lawn Mower is guaranteed to be the best made. Its principal features are in the construction, one of them being that the bottom knife bar is securely bolted to the side frames and is not adjusted as in other Lawn Mowers.

The knives are adjusted by means of a new patent hanger, so constructed with an adjustable brass bushing that all wear can be taken up in the bearings. This hanger raises and lowers the revolving cutter and a positive locking device holds the knives securely in adjustment.
